we've only recently bought a new company. This leaves me with a collection of documents and books of all shapes and sizes. A collection that will continue to grow (hopefully). At this

point what was somewhat of a solution for me turned out to be a barrier to making it into workable form. I've tried to create a naming convention for the file names but I couldn't come up with a set method. I know that sorting the files in any way will keep me from seeing what I really need. I'm using a Windows computer so I'm using Word to try to sort the files. At this point I'm just hoping that someone else has a better way of

doing this. Hi Good afternoon I'm looking for a solution to a problem I've been trying to solve for quite a while. This isn't something that I have a solution for but I'm hoping someone can point me in the right direction. I've been having a hard time finding a library that will allow me to create a SQL file from an excel workbook. When I export the data from excel into a SQL database I lose a lot of information about the data. I

need to merge the information from multiple rows into one row and the the database seems like it won't allow that. So when I run the program it needs to look at a file with many entries and merge them into one row using Excel's formula [Alpha2*1+Alpha1*2+Alpha3*3+Alpha4*4+Alpha5*5+Alpha6*6+Alpha7*7+Alpha8*8+Alpha9*9+Alpha10*10+Alpha11*11+Alpha12*12+Alpha13*13+Alpha14*14+Alpha15*15+Alpha1

6*16] [Date1*1+Date2*2+Date3*3+Date4*4+Date5*5+Date6*6+Date7*7+Date8*8+Date9*9+Date10*10+Date11*11+Date12*12+Date13*13+Date14*14+Date15*15+Date16*16] and so forth. I have a program that exports a file into this format but I couldn't figure out how to go from a CSV to this type of file. Any ideas? Thanks, Brian Is it your property or the house you are renting? If it is your property, you can let the agent know and they
